

Our **MAG0021™** is designed as an independent ignition system thus eliminating torch cables. The system displays a 12 volt 18 amp hour Odyssey® battery guaranteed to provide well over 100 ignitions between charges. The unit displays 500 amp cable connectors, a heavy duty throw switch and a volt gauge to monitor the charging state of the batteries. A float charger keeps the batteries fresh when the unit is not in use. Components are built for years of reliable field service. All ignition systems are installed in heavy duty Pelican™ cases. Ignition systems can be submerged for emergency situations. Weight: 20 lbs.

Heavy duty copper ignition prongs fitted into 500 amp connectors for ultimate field life and reliability.

12 volt Odyssey™ battery with military grade thick plates for up to a ten year life. Batteries are designed for heavy discharge and rapid charging. Works in any position.

Heavy duty 12 volt switch is designed for dependable service in harsh field settings.

Digital battery gauge is shockproof and waterproof for accurate readings of battery charge status.

12 volt battery charger and maintainer preserves the battery when not in use.

Heavy duty cable lugs are pinned, soldered and electrically greased for years of reliable service in harsh settings. NOTE: Magnum also manufactures a smaller, lighter unit for tactical response teams.
